

The Matrix 300™ is an ultra-compact image based bar code reader designed for performance on high speed and Direct Part Marking (DPM) applications.

The Matrix 300™ combines a high resolution sensor with ultra-fast image acquisition: 1.3 megapixels, 60 frames per second. The optical system incorporates a liquid lens module for the electronic control of the focus. As a result the reader offers automatic focus adjustment without the addition of moving parts.

The integrated illuminator is embedded over the entire front surface of the reader. This innovative design results in bright and uniform illumination of the bar code. The lighting design uses both bright field and dark field patterns which provide perfect illumination on normal, etched, highly reflective or textured surfaces.

With exceptionally small physical dimensions and a rotating connector, the Matrix 300™ can be easily integrated into the tightest spaces. The Power over Ethernet (POE) option is one of the unique cost effective features, power and communication is provided to the reader through a standard single Ethernet connection.

The Matrix 300™ is the most cost effective solution for bar code imagers, providing onboard PROFINET-IO and eliminating external communication boxes or converters. The Matrix 300™ interfaces directly with a PROFINET enabled PLC, reducing the complexity and cost of the solution. The M12, 4 pole connection sets a standard that allows for easy integration into existing systems.
